

Desk Yoga & Mobility for Office Workers

1. Core Premise

Prolonged desk work causes forward head posture, rounded shoulders, and shortened hip flexors. Performing targeted, low-intensity mobility drills directly at your desk decompresses the spine, increases thoracic rotation, and restores healthy circulation without requiring a full gym changeout.

2. Action Steps

1. Seated Spinal Twist (Thoracic Decompression)

Sit upright toward the edge of your chair with feet planted flat. Place your right hand on the outside of your left thigh and your left hand on the back of the chair. Inhale to lengthen your spine, exhale to gently rotate through your torso, and hold for 5 slow breaths before switching sides.

2. Desk Pectoral & Lat Stretch (Shoulder Realignment)

Stand behind your chair or place hands flat on your desk edge at shoulder width. Walk your feet back until your arms and torso form a straight line parallel to the ground. Let your chest gently sink toward the floor to stretch the latissimus dorsi and pectoral muscles, holding for 30 seconds.

3. Standing Figure-Four Stretch (Glute & Hip Release)

Stand upright, holding your desk or chair back for balance. Cross your right ankle over your left knee just above the joint, then bend your left knee and sit back into your hips as if settling into an imaginary chair. Hold for 20–30 seconds per side to relieve tightness in the outer hips.

3. Quick Reference & Best Practices

- **The 45/5 Reset Cadence:**

Set a recurring timer to stand, complete one mobility stretch, and take 20 paces every 45 to 60 minutes of uninterrupted seated desk work.

- **Ergonomic Baseline:**

Ensure your screen sits at eye level so your cervical spine remains neutral without craning forward.
